Save the longnose sucker!

Help save the fish of Lake ontario and the great lakes

Because of all the pollution the lakes, the fish are dying out.

They do not have fresh water any more so they get sick

I am focusing on one of the fish in lake Ontario-the Longnose sucker. To find out more about this fish (or others) click here.[This will teach you about the long nose sucker](#)

The Eastern Longnose sucker is a clear and fresh water species and lives in the waters of the great lakes such as Lake Ontario. Its Appearance usually gets confused with the white sucker. The Longnose sucker is long and round with dark olive or gray sides. Its length is usually grown up to 15-25 inches long with a weight from one to two pounds. This fish is a bottom feeding fish which eats food such as aquatic plants, algae and small fish. This sucker is preyed by bass, trout, walleye, pickerel and burbot. They are also disappearing because of pollution and they are being fished out for game and food.

Other Common Names for this fish:=Sturgeon, Northern sucker.

White Sucker Fish

White Sucker Fish are Very interesting. They live in all kinds of lakes and streams. This report is all about White Sucker Fish. It will talk about Where White Sucker Fish live, What They Eat and The Sucker Family.

Where White Sucker Fish Live

White Sucker Fish can be found in all the Great Lakes. You can find White Sucker Fish in Nova Scotia and British Columbia. They can also be found in Yukon Territories, Northwest Territories, and Labrador. White Sucker Fish are bottom dwellers (live at the bottom of the water).

What They Eat

White Sucker Fish eat many different kinds of food. Because they are bottom dwellers they suck up things on the bottom of the water. Some White Sucker fish only eat Insects or Plants. Others eat Larvae, Waterflys, Side Swimmers, Snails, Clams, Algae and Fish Eggs.
